1) Have any data been collected for this study already?
It's complicated. We have already collected some data but explain in Question 8 why readers may consider this a valid pre-registration nevertheless.

2) What's the main question being asked or hypothesis being tested in this study?
Hypothesis 1a/b: The fundamental follower need for protection will be positively associated with the perceived effectiveness of (a) safety leadership and (b) authoritarianism leadership.

Hypothesis 2a/b: The fundamental follower need for affiliation will be positively associated with the perceived effectiveness of (a) benevolence leadership and (b) team-building leadership.

Hypothesis 3a/b/c: The fundamental follower need for status will be positively associated with the perceived effectiveness of (a) narcissism leadership, (b) authoritarianism leadership, and (c) dominant leadership.

Hypothesis 4a/b: The fundamental follower need for vision will be positively associated with the perceived effectiveness of (a) vision communication leadership and (b) high-expectation leadership.

Hypothesis 5a/b: The fundamental follower need for expertise will be positively associated with the perceived effectiveness of (a) competence leadership and (b) intellectual stimulation leadership.

Hypothesis 6a/b: The fundamental follower need for fairness will be positively associated with the perceived effectiveness of (a) moral character leadership and (b) virtue leadership.

3) Describe the key dependent variable(s) specifying how they will be measured.
Perceived Leadership Effectiveness:
- Authoritarianism/Benevolence/Moral Character derived from Paternalistic Leadership
- Team-building/Vision communication/High-expectation/Intellectual stimulation derived from Transformational Leadership
- Dominance/Competence/Virtue derived from Status Attainment Framework
- Safety
- Narcissism

a. simple average scores across the items of each leadership.
b. latent variables produced by the SEM.

4) How many and which conditions will participants be assigned to?
Participants will not be assigned to any condition given there are no experimental conditions. The present study is a survey study.

5) Specify exactly which analyses you will conduct to examine the main question/hypothesis.
a. Linear regressions predicting perceived leadership effectiveness with the fundamental follower needs.
b. SEMs predicting perceived leadership effectiveness with the fundamental follower needs.
c. Retest reliability of fundamental follower needs.

6) Describe exactly how outliers will be defined and handled, and your precise rule(s) for excluding observations.
a. We will exclude participants who incorrectly answer any of the attention check questions.
b. We will exclude participants with inconsistent demographic data, like gender (between the recruitment platform, Time 1, and Time 2 responses).

7) How many observations will be collected or what will determine sample size? No need to justify decision, but be precise about exactly how the number will be determined.
We aim to recruit at least 300 valid participants after two waves of data collection.

8) Anything else you would like to pre-register? (e.g., secondary analyses, variables collected for exploratory purposes, unusual analyses planned?)
While we have collected data on fundamental follower needs at Time 1, we have not yet gathered data on fundamental follower needs and perceived leadership effectiveness at Time 2. We believe this will not compromise the validity of this pre-registration.
